

**Daffodil International University**  
Department of Computer Science & Engineering  
Fall 2024

**Quiz 2**

**Course Title:** Data Structure  
**Course Code:** CSE123

**Time:** 40 minutes  
**Marks:** 15

**Answer all the questions:**

- 1) You are given the following infix expression:

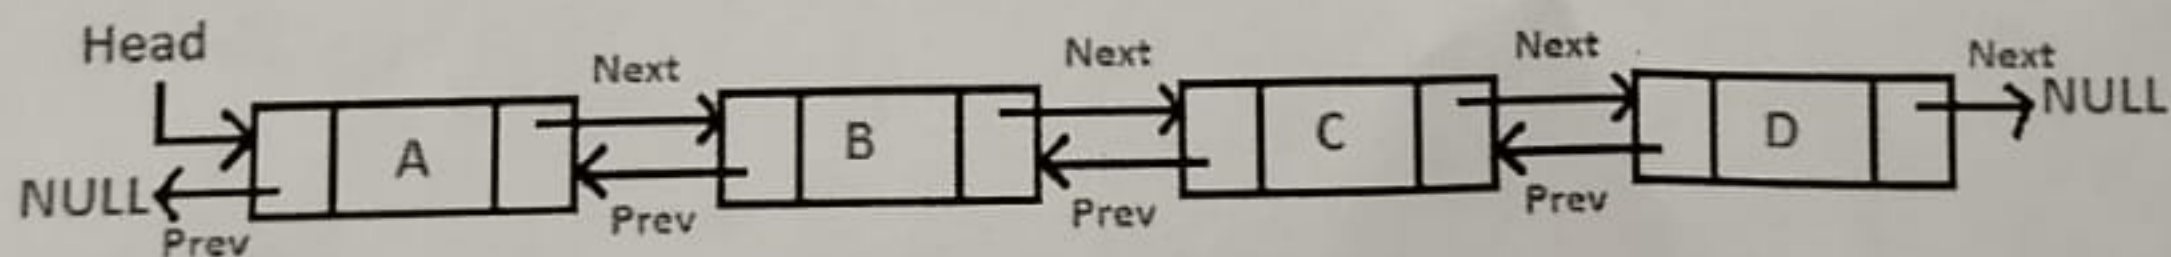

$$A + B * (C ^ D - E) ^ (F + G / H) - I$$

- (a) Convert this infix expression to postfix notation using the stack-based algorithm. Show each step of the stack and the output as the algorithm proceeds.
- (b) After converting the infix expression to postfix, evaluate the resulting postfix expression using a stack, assuming the following values for the operands:

$$A = 5, B = 2, C = 3, D = 2, E = 6, F = 1, G = 8, H = 4, I = 7$$

[6+4]

- 2) Following is a linked list having four nodes. Each node has a data part containing a character type data and two pointers pointing to its two neighbor nodes. Show the code segments line-by-line to implement this linked list in C language.
