

Daffodil International University
Department of Computer Science and Engineering
Faculty of Science & Information Technology
Midterm Examination, Spring 2025
Course Code: CSE123, Course Title: Data Structures
Level:1 Term:2 Batch: ALL
Time: 1.5 Hours Marks: 25

Answer ALL Questions

[The figures in the right margin indicate the full marks and corresponding course outcomes. All portions of each question must be answered sequentially.]

1.	<p>a) Explain the concept of a self-referential structure in C. Provide an example. 3</p> <p>b) Write necessary code using C language to implement a Linear Linked List with the following operations: 7</p> <ol style="list-style-type: none">1. Insert at End2. Delete from Beginning3. Display the List <p>Requirements:</p> <ul style="list-style-type: none">• Define node containing <i>data</i> (int) and a <i>pointer</i> (self referential).• Use dynamic memory allocation (malloc and free) for node creation and deletion.• Provide reasoning for using a linked list in applications like data storage for Library. <p><i>(Full correct implementation: 7 marks, Partial correctness: 4-5 marks, Minor issues: 2-3 marks)</i></p>	CO1 CO2
2.	<p>a) Why is dynamic memory allocation preferred when implementing linked lists? Explain with an example. 2</p> <p>b) Implement a Stack using a Linked List in C with the following operations: 8</p> <ol style="list-style-type: none">1. Push (Insert an element)2. Pop (Remove the top element)3. Peek (View the top element)4. isEmpty (Check if the stack is empty) <p>Requirements:</p> <ul style="list-style-type: none">• Explain the time complexity of each operation.	CO1 CO2

	<ul style="list-style-type: none"> • Provide appropriate output for sample inputs. <p><i>(Full correct implementation: 8 marks, Partial correctness: 5-6 marks, Minor issues: 3-4 marks)</i></p>		
3.	<p>Problem Solving (Analysis & Synthesis Level)</p> <p>Problem Scenario: A printer management system requires efficient handling of print jobs. Each print job has a priority value. The system should process:</p> <ul style="list-style-type: none"> • High-priority jobs immediately (Stack behavior: LIFO). • Normal jobs in the order they were received (Queue behavior: FIFO). <p>Task:</p> <ol style="list-style-type: none"> 1. Propose a combination of Stack and Queue to design this system. 2. Draw a flowchart or diagram to represent the process. 3. Explain how the system handles multiple job requests with varying priorities. <p><i>(Solution approach: 3 marks, Diagram: 1 mark, Explanation: 1 mark)</i></p>	5	CO2

Good Luck
